Vim Cheat Sheet https://vim.rtorr.com/

Working with multiple files

## Vim Choot Shoot

Vim Cheat Sheet	t	
Global	Editing	Macros
:h[elp] keyword - open help for keyword	<b>r</b> - replace a single character.	<b>qa</b> - record macro a
:sav[eas] file - save file	<b>R</b> - replace more than one character, until <b>ESC</b> is pressed.	<b>q</b> - stop recording macro
as	<b>J</b> - join line below to the	@a - run macro a
:clo[se] - close current pane	current one with one space in between	@@ - rerun last run macro
:ter[minal] - open a	gJ - join line below to the	Cut and paste
terminal window	current one without space in	<b>yy</b> - yank (copy) a line
<b>K</b> - open man page for word under the cursor	gwip - reflow paragraph	2yy - yank (copy) 2 lines
Cursor movement  h - move cursor left		yw - yank (copy) the characters of the word from the cursor position to the start of the next word
	g~ - switch case up to motion	
<b>j</b> - move cursor down	<b>gu</b> - change to lowercase up to motion	yiw - yank (copy) word under
	<b>gU</b> - change to uppercase up to	the cursor
<b>k</b> - move cursor up	motion	yaw - yank (copy) word under
1 - move cursor right	<b>cc</b> - change (replace) entire line	the cursor and the space after or before it
gj - move cursor down (multi- line text)	<b>c\$</b> or <b>C</b> - change (replace) to	y\$ or Y - yank (copy) to end of line
<b>gk</b> - move cursor up (multiline text)	the end of the line  Ciw - change (replace) entire	<b>p</b> - put (paste) the clipboard after cursor
$\boldsymbol{H}$ - move to top of screen	word	
${f M}$ - move to middle of screen	<b>CW</b> or <b>Ce</b> - change (replace) to the end of the word	<b>P</b> - put (paste) before cursor <b>gp</b> - put (paste) the clipboard
L - move to bottom of screen	S - delete character and	after cursor and leave cursor after the new text
<ul><li>w - jump forwards to the start of a word</li><li>W - jump forwards to the start of a word (words can contain</li></ul>	substitute text <b>S</b> - delete line and substitute	gP - put (paste) before cursor
	text (same as cc)	and leave cursor after the new text
punctuation)	<b>xp</b> - transpose two letters (delete and paste)	<b>dd</b> - delete (cut) a line
<b>e</b> - jump forwards to the end of a word	<b>u</b> - undo	2dd - delete (cut) 2 lines
<b>E</b> - jump forwards to the end of a word (words can contain punctuation)	U - restore (undo) last changed line	<b>dw</b> - delete (cut) the characters of the word from the cursor position to the start of the next word
	Ctrl + r - redo	
<b>b</b> - jump backwards to the start of a word	• - repeat last command	diw - delete (cut) word under the cursor
<b>B</b> - jump backwards to the start of a word (words can contain punctuation)	Marking text (visual mode)  V - start visual mode, mark lines, then do a command (like	daw - delete (cut) word under the cursor and the space after or before it
<b>ge</b> - jump backwards to the end of a word	y-yank)  V - start linewise visual mode	:3,5d - delete lines starting from 3 to 5
gE - jump backwards to the end of a word (words can	O - move to other end of marked area	:g/{pattern}/d - delete all lines containing pattern
contain punctuation) % - move cursor to matching	Ctrl + v - start visual block mode	:g!/{pattern}/d - delete all lines not containing pattern
character (default supported pairs: '()', '{}', '[]' - use :h matchpairs in vim for more	<b>0</b> - move to other corner of block	<b>d\$</b> or <b>D</b> - delete (cut) to the end of the line
info)  • jump to the start of the line	<b>aw</b> - mark a word	<b>x</b> - delete (cut) character
	<b>ab</b> - a block with ()	Indent text
^ - jump to the first non-blank character of the line	<b>aB</b> - a block with {}	>> - indent (move right) line one shiftwidth
<b>\$</b> - jump to the end of the line	at - a block with <> tags	<< - de-indent (move left) line
<b>g_</b> - jump to the last non-blank character of the line	ib - inner block with ()	one shiftwidth
gg - go to the first line of the	<b>iB</b> - inner block with {}	>% - indent a block with () or {} (cursor on brace)

it - inner block with <> tags

<% - de-indent a block with ()</p>

:e[dit] file - edit a file in a new buffer :bn[ext] - go to the next buffer :bp[revious] - go to the previous buffer :bd[elete] - delete a buffer (close a file) :b[uffer]# - go to a buffer by index # :b[uffer] file - go to a buffer by file :1s or :buffers - list all open buffers :sp[lit] file - open a file in a new buffer and split window :vs[plit] file - open a file in a new buffer and vertically split window :vert[ical] ba[11] - edit all buffers as vertical :tab ba[11] - edit all buffers as tabs Ctrl + ws - split window Ctrl + wv - split window vertically Ctrl + ww - switch windows Ctrl + wq - quit a window Ctrl + wx - exchange current window with next one Ctrl + w= - make all windows equal height & width Ctrl + wh - move cursor to the left window (vertical split) Ctrl + wl - move cursor to the right window (vertical split) Ctrl + wj - move cursor to the window below (horizontal Ctrl + wk - move cursor to the window above (horizontal split) Ctrl + wH - make current window full height at far left (leftmost vertical window) Ctrl + wL - make current window full height at far right (rightmost vertical window) Ctrl + wJ - make current window full width at the very bottom (bottommost horizontal window) Ctrl + wK - make current window full width at the very top (topmost horizontal window) Diff zf - manually define a fold up to motion zd - delete fold under the cursor za - toggle fold under the cursor zo - open fold under the cursor zc - close fold under the cursor zr - reduce (open) all folds by one level zm - fold more (close) all folds by one level zi - toggle folding functionality ]c - jump to start of next change [c - jump to start of previous change do or :diffg[et] - obtain (get) difference (from other

document

m (	Cheat Sheet	
	$\boldsymbol{G}$ - go to the last line of the document	Esc or Ctrl + c - exit vis
	${\bf 5gg}~{\rm or}~{\bf 5G}$ - go to line ${\bf 5}$	Visual commands
	<b>gd</b> - move to local declaration	> - shift text right
	$\mathbf{g}\mathbf{D}$ - move to global declaration	< - shift text left
	$\mathbf{fx}$ - jump to next occurrence of character $\mathbf{x}$	y - yank (copy) marked text
	<b>tx</b> - jump to before next occurrence of character x	~ - switch case
	<b>Fx</b> - jump to the previous occurrence of character x	<b>u</b> - change marked text to lowercase
	<b>Tx</b> - jump to after previous occurrence of character x	<b>U</b> - change marked text to uppercase
	; - repeat previous f, t, F or T movement	Registers :reg[isters] - show
	, - repeat previous f, t, F or T movement, backwards	registers content
	} - jump to next paragraph (or	"xy - yank into register x
	function/block, when editing code)	" <b>xp</b> - paste contents of register x
	{ - jump to previous paragraph (or function/block, when editing code)	"+y - yank into the system clipboard register
	<b>zz</b> - center cursor on screen	"+p - paste from the syste clipboard register
	<b>zt</b> - position cursor on top of the screen	Marks and positions :marks - list of marks
	<b>zb</b> - position cursor on bottom of the screen	<b>ma</b> - set current position for mark A
	Ctrl + e - move screen down one line (without moving cursor)	`a - jump to position of mA
	Ctrl + y - move screen up one line (without moving cursor)	y`a - yank text to position mark A
	Ctrl + b - move screen up	<b>0</b> - go to the position wl Vim was previously exited
	one page (cursor to last line)  Ctrl + f - move screen down	" - go to the position who last editing this file
	one page (cursor to first line)  Ctrl + d - move cursor and	• - go to the position of t last change in this file
	screen down 1/2 page  Ctrl + u - move cursor and	- go to the position bef the last jump
	screen up 1/2 page	:ju[mps] - list of jumps
	nsert mode - inserting/appending text	<b>Ctrl</b> + <b>i</b> - go to newer position in jump list
	<b>i</b> - insert before the cursor	Ctrl + o - go to older pos
	$\boldsymbol{I}$ - insert at the beginning of the line	in jump list  : changes - list of chang
	${f a}$ - insert (append) after the cursor	g, - go to newer position change list
	$\boldsymbol{A}$ - insert (append) at the end of the line	g; - go to older position in change list
	<b>0</b> - append (open) a new line below the current line	Ctrl + ] - jump to the ta under cursor
	<b>0</b> - append (open) a new line above the current line	-
	<b>ea</b> - insert (append) at the end of the word	
	Ctrl + h - delete the	

	or {} (cursor on brace)		
or <b>Ctrl</b> + <b>c</b> - exit visual e	>ib - indent inner block with		
l commands	0		
hift text right	>at - indent a block with <>		
hift text left	3== - re-indent 3 lines		
ank (copy) marked text	=% - re-indent a block with ()		
lelete marked text	or {} (cursor on brace)		
witch case	<b>=iB</b> - re-indent inner block with {}		
hange marked text to crease	gg=G - re-indent entire buffer		
hange marked text to ercase	<b>]p</b> - paste and adjust indent to current line		
Eviting			
ters g[isters] - show sters content	: w - write (save) the file, but don't exit		
- yank into register x	:w !sudo tee %-write out the current file using sudo		
- paste contents of ster x	:wq or :x or ZZ - write (save) and quit		
- yank into the system poard register	: <b>q</b> - quit (fails if there are unsaved changes)		
- paste from the system poard register	:q! or ZQ - quit and throw away unsaved changes		
and positions  rks - list of marks	: wqa - write (save) and quit on all tabs		
set current position for	Search and replace		
k A	/pattern - search for pattern		
jump to position of mark	?pattern - search backward		
- yank text to position of k A	for pattern		
go to the position where	\vpattern - 'very magic' pattern: non-alphanumeric characters are interpreted as special regex symbols (no escaping needed)  n - repeat search in same		
was previously exited			
go to the position when editing this file			
go to the position of the	direction		
go to the position before	<b>N</b> - repeat search in opposite direction		
ast jump	:%s/old/new/g - replace		
[mps] - list of jumps	all old with new throughout file		
<b>1</b> + <b>i</b> - go to newer tion in jump list	:%s/old/new/gc - replace all old with new throughout file with confirmations		
<b>1</b> + <b>o</b> - go to older position mp list	:noh[lsearch] - remove highlighting of search matches		
anges - list of changes	Search in multiple files		
go to newer position in age list	:vim[grep] /pattern/ {`{file}`} - search for pattern in multiple files		
go to older position in age list			
1 + ] - jump to the tag	:cn[ext] - jump to the next match		
	:cp[revious] - jump to the previous match		
	:cope[n] - open a window containing the list of matches		
	:ccl[ose] - close the		

buffer)
dp or :diffpu[t] - put difference (to other buffer)
:diffthis - make current window part of diff
:dif[fupdate] - update differences
:diffo[ff] - switch off diff mode for current window

:ccl[ose] - close the

character before the cursor during insert mode

Ctrl + w - delete word before the cursor during insert mode

**Ctrl** + **j** - add a line break at the cursor position during insert mode

Ctrl + t - indent (move right) line one shiftwidth during insert mode

**Ctrl** + **d** - de-indent (move left) line one shiftwidth during insert mode

**Ctrl** + **n** - insert (autocomplete) next match before the cursor during insert mode

Ctrl + p - insert (autocomplete) previous match before the cursor during insert mode

**Ctrl** + **rx** - insert the contents of register x

 $\label{eq:ctrl} \begin{tabular}{ll} \textbf{Ctrl} + \textbf{ox} - \text{Temporarily} \\ \text{enter normal mode to issue} \\ \text{one normal-mode command } x. \\ \end{tabular}$ 

Esc or Ctrl + c - exit insert mode

quickfix window

labs

:tabnew or :tabnew
{page.words.file} open a file in a new tab

Ctrl + wT - move the current split window into its own tab

gt or :tabn[ext] - move to
the next tab

gT or :tabp[revious] - move to the previous tab

#gt - move to tab number #

:tabm[ove] #-move
current tab to the #th position
(indexed from o)

:tabc[lose] - close the current tab and all its windows

:tabo[nly] - close all tabs except for the current one

:tabdo command - run the command on all tabs (e.g. :tabdo q - closes all opened tabs)
